

## **Abstract**

An efficient strategy for the synthesis of cycloheptannulated arenes and heteroarenes *via* an Intramolecular Baylis Hillman Reaction (IMBH) has been developed; also efforts have been made in order to develop the enantioselective version of the reaction.

## **Abstract**

An efficient strategy for the synthesis of cycloheptannulated arenes and heteroarenes *via* an Intramolecular Baylis Hillman Reaction (IMBH) has been developed; also efforts have been made in order to develop the enantioselective version of the reaction.
